

This Bozeman, MT based company is devoted to the development and commercialization of photonic technology, specializing in the development of optical devices and systems using engineered bulk and waveguide nonlinear optical materials. AdvR is a recognized leader in the engineering of nonlinear optical structures for a host of photonic devices and applications. AdvR specifically targets the development of products with one or more of the following features: high stability, low phase noise, precise wavelength control, long-life operation, high visible powers, and high wall-plug efficiency.

Since this company began operations in 1999 and it has won over 35 SBIR awards! MTIP counselors have worked closely with AdvR personnel reviewing their SBIR proposals before submission. MTIP counselors read the proposals and give productive feedback to develop stronger, more competitive proposals.
